

D3. Disruptive Innovation – Getting More for Less

It's a known fact as government agency, innovation can become stale. In today's environment, if we are standing still and not moving forward, even as a technical agency as NASA, we can be left behind. We are constantly asked to do more with less in our organization. This workshop will introduce the concept of “disruptive innovation”, provide information/example for participants to use on being a new CHANGE AGENT and LEADER for your organization/agency.

Sophia Mao Smith, P.E., is a member of the Payload Software Engineering & Integration team in the International Space Station Program Office (ISSPO) at NASA. Sophia's 30-year history at Johnson Space Center started with the Space Shuttle Program included software engineer, industrial engineer, reliability engineer and Flight Training Load manager. In 1997, Sophia transitioned to the ISSPO, where she held various positions such as senior systems engineer, NASA manifest and crew provisioning lead, executive intern for the Office of the Center Director, detail to NASA Headquarters and technical lead on the Source Evaluation Board. Sophia received a Master of Science in Technical Management from Embry-Riddle Aeronautical University and BS in Industrial Engineering from Texas A&M University.

Sophia was born and raised in Taiwan and came to U.S. when she was 14. She has been actively involved in Asian Pacific American activities since 1988 with JSC's Asian Pacific American Council and served as Co-Chair in 1991. Beside active in the Asian community, Sophia was also active in the wider community. She was elected to the Clear Creek Independence School District board of trustee in 1995 and served as the president of the board in 1998. Sophia was honored by the OCA-Greater Houston Chapter as an Outstanding Asian-Pacific American Employee for 2012.
